

Game Design Document

1. Game Overview

1.1. Game Concept

Block Blast is a high-octane puzzle experience set against a deep, synthwave-inspired backdrop. It reimagines classic spatial logic where players navigate an 8x8 digital arena using revolving sets of geometric shapes. The game emphasizes rhythm, foresight, and satisfying combo mechanics without the pressure of a timer.

1.2. Audience

Casual gamers, puzzle enthusiasts, and players seeking 'flow state' gameplay. Suitable for all ages.

1.3. Platform / Technology

HTML5 (DOM-based rendering), CSS3 Animations, Vanilla JavaScript. responsive design for Desktop and Mobile browsers.

1.4. Genre

Puzzle / Strategy

1.4.1. Sub-Genre

Grid Logic / Block Fitting

1.5. Camera / Perspective

2D Static Top-Down Interface

2. Gameplay

2.1. Objectives

Primary: Score points by fitting blocks into the grid to clear rows and columns. Secondary: Achieve high scores and maintain board space to prevent a 'Game Over' state.

2.2. Progression

Endless high-score pursuit. The difficulty is emergent; as the board fills, finding space for specific shapes becomes increasingly difficult.

2.3. Play Flow

Player receives 3 shapes -> Player drags shape to grid -> Valid placement triggers 'Ghost' preview -> Release to place -> Filled lines trigger 'Blast' effect -> Score increases -> Repeat until no moves remain.

3. Mechanics

3.1. Rules

1. Players are dealt three random shapes at a time. 2. Shapes can be placed on any empty grid cells. 3. Filling a row (8 cells) or column (8 cells) clears it. 4. Game ends when current shapes cannot fit in remaining

empty space.

3.2. Physics

N/A (Grid-based logic). Visual feedback includes 'Block-Pop' scaling animations and 'Clear-Pulse' effects.

3.3. Character Movement

Mouse Drag & Drop or Touch & Drag for mobile devices. Interactive 'Ghost' preview indicates valid drop zones.

3.4. Economy

Score-based economy. Points awarded for placing blocks and clearing lines. Multipliers applied for combos (clearing multiple lines at once).

4. Visual Graphics

4.1. Visual System

Cyber-Refined Aesthetic. Dark Synthwave palette (Deep Blue #1a1a2e background) with Neon accents (Red #ff6b6b, Teal #4ecdc4, Yellow #ffe66d). Features CSS3 gradients and glow effects.

4.2. Interface (UI)

Clean, flat 2D interface using 'Fredoka' and 'Space Mono' fonts.

4.2.1. Game Menus

1. Main HUD (Score, Best Score, Grid). 2. Game Over Overlay (Final Score, Play Again button). 3. Combo Notifications (Pop-up text).

5. First-Time User Flow / Experience

Instant entry. No loading screens or tutorials. The 'Ghost' preview system intuitively teaches the player where blocks can fit immediately upon interacting with the first piece.

6. Story and Narrative

6.1. Backstory / Lore

Abstract digital setting. No narrative backstory.

6.2. Main Plot

N/A

6.2.1. Plot Progression

N/A

6.3. Cutscenes

None. Transitions are handled via CSS animations (fadeIn, scaleIn).

7. Characters

7.1. Main Characters

The Blocks: Geometric polyomino shapes (squares, lines, L-shapes) formed by glowing neon cells.

7.2. Enemies

The Grid: The limited 8x8 space acts as the antagonist, restricting movement as the game progresses.

8. Game World

8.1. Look & Feel

A digital void. Dark, sleek, and responsive. The grid is a contained arena with a dark border (rgba 0,0,0,0.7) and deep background (#0f1419).

8.2. Levels

Single Level: 8x8 Grid that resets upon failure.

9. Art Assets

- Grid Cell (Empty/Filled states)
- Block Shapes (various configurations)
- UI Icons (Trophy/Score)
- Buttons (Gradient styled)
- Particle Effects (CSS-based animations for clearing)
- Fonts (Fredoka, Space Mono)
