

Game Design Document

1. Game Overview

1.1. Game Concept

A pixel-perfect browser-based homage to 8-bit arcade sharpshooting. Players act as an elite marksman clearing skies of erratic ducks using a high-precision crosshair. The game features dynamic difficulty, resource management, and a nostalgic aesthetic.

1.2. Audience

Retro gaming enthusiasts, casual arcade players, and fans of the original 8-bit era.

1.3. Platform / Technology

HTML5 Canvas, CSS3, JavaScript. Optimized for Desktop browsers with mouse input.

1.4. Genre

Arcade / Shooter

1.4.1. Sub-Genre

Gallery Shooter / Rail Shooter

1.5. Camera / Perspective

First-Person (Static Screen)

2. Gameplay

2.1. Objectives

Shoot down ducks before they fly away to score points and advance rounds. Avoid running out of ammunition (3 bullets per duck).

2.2. Progression

Level-based progression where ducks become faster and move more erratically with each passing round.

2.3. Play Flow

Round Start -> Ducks Spawn -> Player Aims/Shoots -> Hit/Miss Calculation -> Score Update -> Round End or Game Over.

3. Mechanics

3.1. Rules

Player has 3 bullets per target. Misses result in the target escaping. Game Over occurs when loss conditions are met (too many misses).

3.2. Physics

2D kinematic movement for targets (ducks) with increasing velocity. Hitscan shooting mechanics.

3.3. Character Movement

Mouse-controlled crosshair (cursor hidden, custom div element used).

3.4. Economy

Score-based economy. No currency. Points awarded for successful hits.

4. Visual Graphics

4.1. Visual System

NES-inspired 8-bit pixel art style. CSS image-rendering set to 'pixelated' for crisp edges. Color palette mimics vintage console limitations.

4.2. Interface (UI)

Bottom HUD bar displaying Score, Round Number, Hit/Miss counters, and visual bullet representation (red circles).

4.2.1. Game Menus

Minimalist overlay menus for 'Round Info' and 'Game Over' (displaying final score and 'Play Again' button).

5. First-Time User Flow / Experience

Immediate drop into gameplay with a 'Round 1' overlay. Intuitive mouse controls require no tutorial.

6. Story and Narrative

6.1. Backstory / Lore

The player is an elite marksman in the tall grass, tasked with clearing the skies.

6.2. Main Plot

Survive endless waves of waterfowl while dealing with a cheeky hunting dog companion.

6.2.1. Plot Progression

Environmental storytelling through increasing chaos and speed of targets.

6.3. Cutscenes

Minimal in-game animations for the dog retrieving ducks or laughing at misses.

7. Characters

7.1. Main Characters

The Hunter (Player/Invisible), The Hunting Dog (NPC companion/mockery).

7.2. Enemies

Ducks (Targets with varying flight patterns).

8. Game World

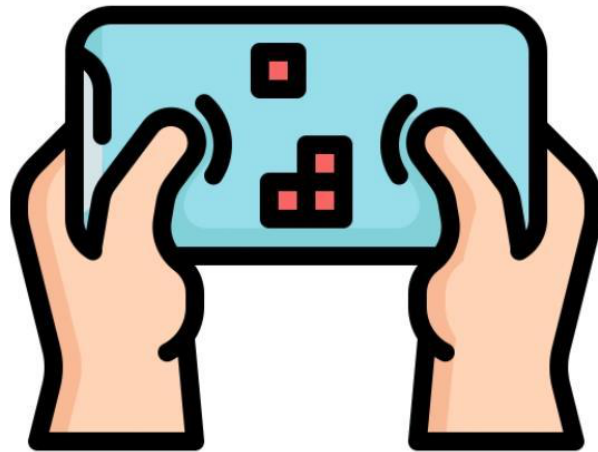

8.1. Look & Feel

Marshland setting with tall grass, blue skies, and prominent vegetation. Trees have been scaled up (per V1.1 update) to enhance the environment.

8.2. Levels

Single screen environment that persists, with difficulty scaling via enemy speed rather than map changes.

9. Art Assets

- Custom Crosshair Cursor
- Duck Sprites (Fly, Die, Fall)
- Dog Sprites (Sniff, Laugh, Catch)
- Background Layer (Sky, Clouds)
- Foreground Layer (Tall Grass, Large Trees)
- UI Icons (Bullets, HUD Frames)
- Sound Effects (Shot, Quack, Thud)
